

Reasonable Useful Lifetime Letters in HDMS

Presenter

- Presenting today:

Lisa Anderson from Universal Software Support, Media & Documentation division
& creator of USS Academy!

Reasonable Useful Lifetime (RUL) Letters Tool is Here!

Available in HDMS as of version 3.15, RUL Letters Tool will:

- Provide a way to easily identify equipment that has already, or will reach it's reasonable useful lifetime
- Deliver a tool to easily create notification letters to eligible clients for both Oxygen & Non-Oxygen equipment.

Definitions

What does RUL mean?

- Reasonable Useful Lifetime is the *length of time a piece of equipment is expected to last while being used continuously.*
- This means Medicare has acknowledged that certain items will *wear out*, or become *outdated* after a certain period of time.

Which items are eligible & when?

- Oxygen Concentrators
- Capped rental items like hospital beds, wheelchairs, PAP, etc.
- No sooner than 5 years from the DOS placed with patient AND irreparable wear & tear.
- Check your program rules for all the documentation guidelines!

Logic

Eligibility for RUL Letters in HDMS

- Equipment will only be eligible for RUL Letters if it is rented Oxygen equipment or items sold or converted to sale through the capped rental process.
 - Sold a Nebulizer to a client 5 years ago
 - Placed a rental CPAP with a client that rented for 13 months then converted to sale
 - Have an Oxygen patient with a Concentrator that billed for 36 Months and then went into Maintenance & Service

Now you can identify these clients easily and start the conversation for new revenue! Get them new technology! Eliminate old unsafe equipment!
- Equipment that was picked up or returned will not be eligible.
