5010 News and Updates on User Forum

USSI has recently finished development of our User Forum. On this Forum you will find all of the latest updates on ANSI 5010 as well as other important development topics. In addition to this, you will have the ability to communicate with your industry peers on topics that are important to you!   Below you will find a link to the user forum where you can sign up.

Reducing Server Slowdowns

Are you experiencing server slowdowns within HDMS? Do you know how to regularly rebuild your indexes? Do you know how to accommodate for the growth of your database?

In our effort to improve performance and the user experience, we have created a document that outlines best practices for regular maintenance procedures to the HHSQLDB database and your SQL Server environment. The link below will provide an easy to read document full of information that you can start using today!

HDMS Audit Reports

Have you ever wondered how information was changed in your tables or work orders? Who made the change and when? Where did that A/R go? Why did the charged amount get changed on a work order?

Did you know that HDMS comes equipped with three powerful audit reports that answer those questions? In the Reports menu simply titled "Audit Reports", you will find three reports: *Table Audit Report, Work Order Price Change Audit Report, and Voided Transaction Report*. These reports will allow you to determine which records were changed, added or deleted, when and by whom.

Have a look at the options that these reports offer and give them a try. They may solve a lot of mysteries!
